

Archive OEM Curve Scan - CW-241 Pump Family

Archive file: 1998 vendor curve scan. The curve uses the pump family designation CW-P-241 and a 1750 rpm curve basis. It does not contain the 2026 calibration factor, field impeller trim, or current alignment setup.

1. Curve table extracted from archive scan

impeller dia mm	speed rpm	flow gpm	head ft	efficiency pct	NPSHr ft	archive note
300	1750	900	112	62	10.1	old curve
300	1750	1200	102	73	12.3	old curve
300	1750	1500	88	77	15.7	old curve
300	1750	1800	69	70	20.4	old curve
292	1750	900	105	61	9.8	trimmed archive
292	1750	1200	95	72	11.9	trimmed archive
292	1750	1500	80	75	15.2	trimmed archive
292	1750	1800	61	68	19.8	trimmed archive

2. Archive metadata and conflict notes

field	archive value	current conflict
pump designation	CW-P-241	Current field tag is CW-P-241B.
speed basis	1750 rpm	Current nameplate and tach readings are near 1785/1771 rpm.
impeller trim basis	292 mm and 300 mm curves	Current work order and field survey show 288-289 mm.
flow correction	none	Current flowmeter factor is 0.973.
coupling spacer	not included	Current installed spacer is 112.0 mm.

3. Use limitation

This archive curve is related context for pump-family behavior. It is not the controlling source for final tag, installed trim, flowmeter-corrected operating flow, seal flush arrangement, or coupling spacer reconciliation.
